Portfolio: <https://tomiwa-ilor.github.io>

Dear Hiring Manager,

I am writing to express my interest in the Data Lead and Data Management opportunity. I bring over **8 years** of experience designing and deploying data, machine learning and AI systems across advertising, public sector, finance and technology, turning complex data into decisions the business can act on.

At **Aylo**, I work within **Ads Intelligence** on high-volume advertising data. I built and productionized **click-prediction models** using **XGBoost** across billions of impressions, with training pipelines, calibration and model promotion workflows on **ClickHouse** and **GCS**, and led the move of our ML services onto **Kubernetes** with CI/CD and **Prometheus/Jaeger** observability. I designed a **bid recommendation system** that estimates the lowest bid needed to reach a target win probability, and built an **agentic AI MVP** with **LangGraph** that brings LLM tool orchestration into it. I also delivered an image-understanding service with **Moondream2**, **Kimi-VL** and **CLIP**.

Before Aylo, I led the development of a **Data Management Platform** at the **BC Public Service**, Ministry of Citizens' Services, consolidating over **C\$1.5B** in telecom spend across thirteen public sector entities. Using **Python**, **AWS Glue**, **Lambda**, **Athena** and **Terraform**, I built event-driven pipelines and **Power BI** dashboards that automated monthly financial reporting, strengthened data governance and gave executive leadership a consistent view of spend.

At **HelpSeeker Technologies**, I developed **Python ETL** pipelines that automated data ingestion for the **Karto** platform and used **Airflow** to orchestrate batch workflows. I also designed a document similarity model using **NLP** and **HuggingFace** models to improve search relevance, deployed with **Terraform**, **Kubernetes** and **Flask**.

At **Logically**, I worked on the **Logically Intelligence** threat intelligence platform. I led ML upgrades using **ensemble learning** and **autoencoders** that increased threat detection accuracy by **32%**, and rebuilt classification pipelines with **BERT**, **DistilRoBERTa** and **Longformer**, surpassing prior benchmarks in precision and latency. I integrated model outputs into **Elasticsearch** for real-time entity and misinformation detection on live news, managed **MLOps** pipelines on **GCP (Vertex AI, Pub/Sub, Cloud Composer, MLflow)**, and moved serving to async **FastAPI** with **Docker** and **Terraform**. I also worked directly with government and private sector threat analysts to tune model thresholds to their risk tolerance, and led our Agile sprint cycles.

I will begin the **Professional MBA at UBC Sauder** in January 2027. I am particularly interested in roles where I can combine that business perspective with my technical experience to guide data strategy, build strong teams, and deliver data and AI capabilities aligned with business priorities.

Thank you for your consideration. I welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Israel Ilori

ISRAEL ILORI

Senior Data & AI Engineer

Portfolio: <https://tomiwa-iori.github.io>

PROFILE SUMMARY

- Professional MBA, University of British Columbia, Sauder School of Business | Class of '29
- M.Sc. in Data Science, University of Manchester
- Developing advanced capabilities in Business Strategy, Leadership, Finance, and Organizational decision-making to complement 8+ years of experience in Data, AI, and Technology.
- 8+ years of end-to-end ML engineering experience across feature engineering, model training, CI/CD deployment and monitoring using Azure, AWS, & Google cloud services
- 8+ years' experience building custom ETL/ELT batch and streaming pipelines on cloud microservices
- 7+ years' experience delivering business intelligence dashboards and predictive machine learning systems that shape marketing revenues, customer retentions, and strategic decision-making
- 5+ years' experience leading agile teams of data engineers/scientists, aligning pipelines with product/marketing priorities
- Proven experience processing Data and ML pipelines, cutting latency and infra cost using dbt & IaC(Terraform)
- Proven experience implementing A/B testing and model monitoring with CI/CD for drift and re-training
- Core skills: Python, LLM fine-tuning, Airflow, MS Fabric/Data Factory, AWS, GCP, Terraform, dbt, Docker, Kubernetes, PostgreSQL, Power BI

SKILLS

- **Programming:** Python (Pandas, NumPy, Scikit-learn), SQL
- **ML / AI:** PyTorch, TensorFlow, LangChain, LangGraph, HuggingFace, MLFlow, CrewAI, AutoGen, GPT models, Ollama, FAISS, RAGs, Agentic AI (AI Tool Orchestration and Prompt Engineering)
- **Database:** ClickHouse, PostgreSQL, Snowflake
- **Data & Pipelines:** Airflow, Azure Data Factory, MS Fabric, IaC (Terraform), dbt, Glue, Lambda, S3, Redshift, BigQuery
- **Analytics & Visualization:** Tableau, Power BI, Grafana, Prometheus, Jaeger
- **DevOps/MLOps:** Docker, Kubernetes, FastAPI, Flask, Postman, CI/CD, Streamlit UI, Git (GitHub, GitLab, Bitbucket)
- **Collaboration:** Agile/Scrum, Jira, Confluence, MS Teams

EXPERIENCE

Sr. Data Developer — Aylo

Jan 2026 – Current

- Built and productionized **click-prediction models** using **XGBoost** across **billions of ad impressions**, with training, calibration and model promotion pipelines on ClickHouse and GCS
- Led the move of ML services onto **Kubernetes**, adding CI/CD, model versioning and **Prometheus/Jaeger** observability so models could be shipped and monitored reliably
- Built an **image-understanding service** that returns a description (Moondream2/Kimi-VL) and a category (CLIP zero-shot) for any ad image URL, deployed as a production **FastAPI** service

- Designed a **bid recommendation system** that finds the lowest bid to hit a target win rate
- Built an **agentic AI MVP** with **LangGraph** and a local open-source LLM (Qwen 2.5) on FastAPI/Docker, and designed its extension into bid recommendations by orchestrating tools that query ClickHouse auction history, score candidate bids and explain the result
- Led a **ClickHouse schema migration** across distributed tables and materialized views on high-volume ad data, with no disruption to downstream reporting

Sr. Data Engineer — BC Public Service (Ministry of Citizens' Services)

Feb 2024 – March 2026

- Led the implementation of a **Data Management Platform** that consolidated and analyzed over **CS\$1.5 billion** in telecom (Rogers & Telus) spend across 13 entities including BC Hydro and WorkSafe BC
- Built **Python ETL** pipelines and **AWS (Glue, Lambda)** scripts to ingest data & transform telecom data into **Parquet** for analytics (**Athena/Power BI**) across the ministry
- Implemented event-driven **ETL** workflows using **S3, Lambda, and Terraform** for automated, production-grade data processing
- Automated monthly financial reporting and built **Power BI** dashboards delivering insights to executive leadership
- Standardized reporting pipelines to improve data reproducibility and consistency for executive decision-making

Sr. Data Engineer — HelpSeeker Technologies

Mar 2023 – Dec 2023

- Built Python ETL pipelines to automate data extraction for the Karto platform, improving ingestion speed and reliability
- Used Airflow to schedule and monitor batch jobs, reducing processing delays and manual oversight
- Designed a document similarity model with NLP and HuggingFace LLMs, increasing retrieval accuracy and search relevance
- **Deployed** the document-matching service using **Terraform, Kubernetes & Flask**, enabling scalable, low-latency inference
- Queried large SQL and NoSQL datasets to generate insights that improved model accuracy and coverage

Data Scientist – Logically

Dec 2021 - Feb 2023

- Led **ML** upgrades to the **Logically Intelligence threat security platform** using **ensemble learning** and **auto-encoders**, improving threat detection accuracy by 32% - [Logically Intelligence](#)
- Rebuilt classification pipelines using **BERT, DistilRoBERTa & LongFormer** transformer models, surpassing prior benchmarks in precision and latency
- Integrated model outputs into **ElasticSearch**, powering real-time entity and misinformation detection across live news data
- Managed the **MLOps pipelines on GCP** using **Vertex AI** for training and deployment, **Cloud Storage** for model artifacts, **Pub/Sub** for event-driven triggers, and **Cloud Composer (Airflow)** for orchestration
- Tracked and versioned experiments with **MLflow**
- Migrated serving layer from **Flask** to **FastAPI**, adopting async APIs for high-concurrency inference and lower response time
- Containerized services with **Docker** and provisioned infrastructure via **Terraform**, ensuring scalable, fault-tolerant releases
- Worked closely with government and private sector **threat analysts** to tune model thresholds to risk tolerance and false-positive trade-offs.
- Led sprint cycles in **Agile**, maintaining full visibility through **Jira** and **Confluence**

Data Scientist — TruTalent Inc.

Oct 2020 - Nov 2021

- Designed and implemented the core NLP matching system that ranked candidates against job descriptions using **TF-IDF vectorization and cosine similarity**
- Transformed job descriptions and resumes into numeric representations and computed similarity scores to identify best-fit candidates
- Built scoring logic to compare skills, titles, and experience keywords, forming the backbone of TruTalent's talent ranking engine
- Collaborated directly with founders and product teams to refine matching logic and improve candidate relevance for customers

Data Analyst — Stanbic IBTC Bank

Dec 2015 - Aug 2018

- Developed insightful and interactive dashboards for senior management decision-making using Excel, Tableau and PowerBI
- Analyzed and identified financial trends and patterns using Python and Python libraries
- Maintained customer databases using SQL, focusing on financial data tracking and analysis
- Collaborated with Product and Business teams to prioritize data-driven needs for each business segment

EDUCATION

- Professional MBA (starting Jan 2027), Sauder School of Business, UBC, Canada
- M.Sc. Data Science, University of Manchester, UK
- B.Sc. Computer Science, Joseph Ayo Babalola University

CERTIFICATIONS

- Google - Cloud Data Engineer
- AWS/Udacity - AWS Machine Learning
- AWS/Udacity - Generative AI with AWS
- Udemy - MLOps in Production
- Udemy – Complete Agentic AI and MCP Course
- Coursera - Practical Data Science
- Coursera - ML Engineering for Production
- Google Certifications - [Link](#)
